

Groundbreaking design

We filed a dozen patents in creating UP7's groundbreaking design. The result is a premium height-adjustable desk that empowers you to manage your health while making a powerful design statement.

Smart technology

UP7 lets you set your preferred sit/stand interval. The worksurface vibrates and controller turns red when it's time to stand.

Spill- and scratch-resistant

Controllers are on both sides of desk and are fully encased to protect against liquids. Scratch-proof OLED screens on each sensor provide 360-degree visibility.

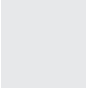

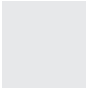

Customizable style

The frame is available in Matte White, or a striking combination of Meteor Gray and Sapphire Blue. Legs can be enclosed or open. Includes integrated power, plus cable management.
