UP7 SERIES

A groundbreaking sit-stand desk

UP7 is a new kind of height-adjustable desk - so groundbreaking, we filed for 10+ patents during its creation. Its smart features monitor sit-stand time, while its unique controller and leg design maximize below-desk space. And its low-energy consumption make it an eco-friendly choice.

10 design patents

Built-in sensor
and alerts improve
employee health

Smart sensor

- Our patented UP7 below-desktop sensor detects how long a user has been sitting or standing, then reminds you to change positions.
- The sensor has a detection range of 31.5".
- Desk has an ultra-low power consumption of <10mA.
- No personal data is stored, so user privacy is respected.

Three steps to better health

Step 1

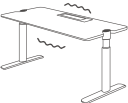

Set your preferred seated duration, from 30 to 60 minutes.

Step 2

When it's time for you to stand, UP7 will remind you:

- A light on the controller will change from green to red and the figure will move from seated to standing.
- The desktop will subtly vibrate for 5 seconds.

Step 3

Switch from sitting to standing with a single touch.

Built-in cable management

UP7 has an extra-wide trench that can accommodate up to 8 workstations' wiring plus users' cords. An optional cable snake manager offers additional control, concealing wires from floor to trench.

Elegant form and function

UP7's unparalleled functionality is matched by its innovative and elegant design:

- OLED controller sits level with worksurface so sit/stand metrics are visible at all times. It's protected by scratch- and waterproof glass.
- Legs align with edge of top, adding several inches of extra below-desk space.
- Felt and glass divider screens available.
- Legs can be specified in white or a blue-and-gray combination.

Optional desk-mounted power module can be added.

Controller

- OLED high-definition display for distortion-free 360° view
- Capacitive touch screen with 99% precision and response speed of <3 seconds.
- Wave-to-wake activation
